

Good afternoon,

I hope everyone that attended April's Intro to Digital Forensics Workshop, had a great time.

Dr. Dae Glendowne is kind enough to donate his time and expertise to DETSEC members and we are fortunate to have SFA's STEM Center in East Texas. Remember, an advanced class is being planned for the future.

Our meeting this month will be Thursday, May 30th at noon. The location is Nacogdoches Memorial Hospital's Auxiliary Conference Room. NMH's address is 1204 N. Mound Street, Nacogdoches. Each person should bring \$8.00 cash to have access to the buffet. Lunch will be served in our meeting room. You will not have to go through the hospital cafeteria line. You get a salad, lunch, dessert and a drink. **I need a headcount, so please RSVP by email to [timleonard@cbtn.com](mailto:timleonard@cbtn.com).**

Kids are extremely vulnerable to cyberattacks and parents and teachers can do more to help educate them. I'm excited about May's speaker. Gabriel Friedlander is a cyber security business owner and author. He has taken it on himself to create a free program called Wizer to address this issue head on.

***“Why are hackers targeting kids and what can be done about it?”***

Kids today are growing up in a cyber world, a world unlike anything experienced in previous generations. They hangout in different places than adults, communicate differently, and spend a tremendous amount of time gaming. Instead of using email they mostly use a wide variety of messaging apps. Just as parents have educated their kids on the dangers in the physical world, they equally need to be taught how to avoid cybercrime. This session will discuss the unique cyber threats and risks kids are facing and how to avoid them.

Gabriel Friedlander

Gabriel started Wizer with a mission to make basic security awareness training free for everyone. And because the average human attention span is 8 seconds – 1 second less than a goldfish! He created training videos to be short and to the point. And best of all it's FREE!

Prior to founding Wizer, Gabriel was the co-founder of ObserveIT, an award-winning company specializing in the detection and prevention of insider threats. He is also the co-author of the book, “Insider Threat Program: Your 90-Day Plan”. For more than a decade, he has researched insider threats and trained numerous organizations on how to avoid and mitigate cybersecurity risk. Through his research, Gabriel discovered the greatest threat to an organization are employees who unintentionally place their organization at risk. In most cases, he found employees were either untrained on the dangers of cyber threats and they often worked around security controls in favor of productivity.
